

See the light!

Energy efficient light globes are five times more efficient than conventional incandescent globes. They also last 4 to 10 times longer. So replace your globes with ones that will save you money on electricity.

It's that simple.

And here's something else for you to ponder: leaving appliances like TVs, DVDs, computers and sound systems on 'standby' mode actually costs you money. In fact any appliance that displays a light or is warm to the touch is sapping your power. Turn them off at the power point and save.

SAVE ENERGY, SAVE MONEY.
