

Works like magic (only cheaper!)

Your humble curtains can save you a lot of money on heating and cooling costs. On warm days closing curtains in hot sunny rooms will make the room cooler. On cooler days closing curtains before it gets dark will help keep heat in.

Simple!

And did you know that for every one degree you turn the thermostat up on a heater, you add up to 10% in running costs? So think about how you use your energy and save money.

SAVE ENERGY, SAVE MONEY.
